(54) Title: WINDOW REGULATOR

(57) Abstract: A window regulator wherein the drive means can be pivoted, during assembly, to move the centers of the driven drum and a guide closer together to provide for easy routing of the flexible drive member and can then be moved apart to tension the flexible drive member to complete the assembly. The regulator can be a single rail regulator or a dual rail regulator and the flexible drive member can be a belt, wire cable or other suitable device.

ABSTRACT

A window regulator wherein the drive means can be pivoted, during assembly, to move the centers of the driven drum and a guide closer together to provide for easy routing of the flexible drive member and can then be moved apart to tension the flexible drive member to complete the assembly. The regulator can be a single rail regulator or a dual rail regulator and the flexible drive member can be a belt, wire cable or other suitable device.
